

INDOOR PRO HYBRID

DESCRIPTION

The *Indoor Pro Hybrid* was developed for tunnel flying. It's the perfect model to do your first "30 to 50" hours of flight, before going for more radical models like the *Skin* or the *Marvel*.

Although it's dedicated to tunnel, you will also be able to enjoy your skydives with it.

Indoor Pro Hybrid are made in both male and female fit.

Available sizes :

Male : S / S-TALL / M / M-TALL / L / L-TALL / XL

Female : XS / S / S-TALL / M

Like many customers, ask us to add a hood to your indoor pro hybrid's order : +40€ (separated or directly stitched on collar)

THINGS TO KNOW

The *Indoor Pro Hybrid* has to fit very tightly ! Putting the suit on and off will probably be a bit more difficult than a classic suit 😅
It's normal for you to feel a bit uncomfortable in the crotch area with both arms raised at the highest level.
If possible, get used to a torso measurement that is rather compact.

On your first trial, the collar could feel a bit too tight. You should get used to it after a few flight sessions.

What are the tall versions ??

Only the torso height, arms and legs have been slightly extended. measurements on width and circumferences remain the same.

To be noted : The *Indoor Pro Hybrid* is not fitted with an inside pocket.

TECHNICAL DETAILS

Suit in light fabric cordura 180gr.
Few articulated parts in spandex "4 way stretch" 330gr and 180gr.
Cordura reinforcements on knees and elbow parts.
